

neodymium magnets

Safety instructions

NOTE: Crushing

Magnets exhibit a strong force of attraction. If two magnets come together, there is a risk of severe collision. Fingers or skin could be crushed.

NOTE: Cardiac pacemakers, data carriers, electronic or mechanical devices

Strong magnetic fields can influence or possibly destroy the above-mentioned products. Observe the specifications of the manufacturers of these products, including the safety distance.

NOTE: Metal splinters

Neodymium magnets can shatter or split off, e.g. when two magnets collide. Risk of injury from flying splinters. Wear safety goggles if necessary.

NOTE: Shipping

Magnets must be packed in the middle of a much larger box, surrounded by sufficient packing material. Otherwise there is a risk of damaging the contents of other shipments.

Please observe special air freight regulations, especially in the USA, Canada and Japan. Please contact your logistics operator when shipping larger quantities.
